

AFON VALE UNIVERSITY HOSPITAL

Fictional NHS Wales Test Organisation

Respiratory Medicine

Ref: AVH/RSP/TEST-1042

PATIENT (FICTIONAL)

Alex Example

DOB: 14 February 1981 (synthetic)

Hospital ID: TEST-H00142

NHS No: 999 999 9901 INVALID

1 Test Lane, Demo Town, ZZ1 1ZZ

Clinic date: 29 July 2026

Dear Dr Sample,

Re: persistent cough and exertional breathlessness

Thank you for referring this fictional patient. Symptoms have been present for approximately six weeks. There is no haemoptysis, fever or unintentional weight loss. Chest examination was clear and oxygen saturation was recorded as 97% on room air.

Investigations: chest radiograph reported no focal consolidation. Spirometry was technically limited and should be repeated. CRP 4 mg/L. Full blood count within the fictional reference range.

Plan

1. Repeat spirometry with reversibility testing.
2. Trial salbutamol inhaler 100 micrograms, two puffs when required.
3. Safety-net: seek urgent assessment for chest pain, haemoptysis or worsening breathlessness.
4. Review in respiratory clinic in eight weeks.

Yours sincerely,

Dr Rowan Fiction

Consultant Respiratory Physician (fictional)
